

Usable Security for Security Professionals

Pooya Jaferian

Laboratory for Education and Research in
Secure Systems Engineering (LERSSE)
University of British Columbia, Vancouver, Canada

Agenda

- Background
- Guidelines and heuristics for IT security tools
- Field study of Identity and Access Management
- Improving access certification interfaces
- Future work

BACKGROUND

Background

HOT-Admin Project

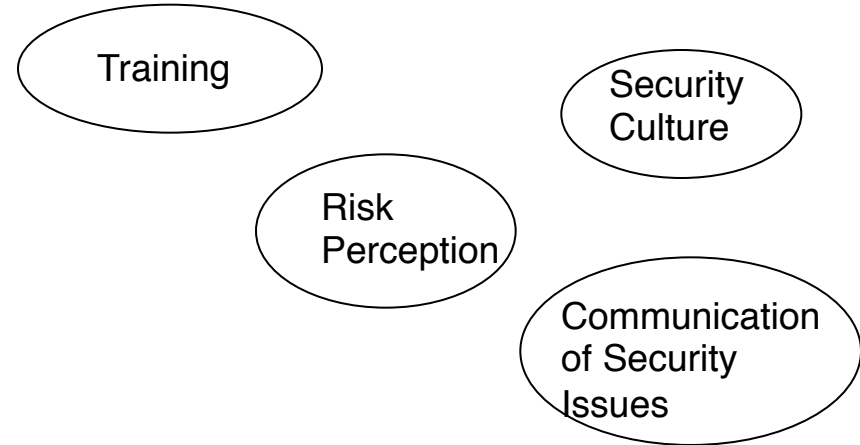

- Field study
 - 36 semi-structured interviews
 - More than 15 hours of participatory observation
- Results
 - Tasks and Tools
 - IT Security vs. IT
 - Challenges in ITSM (IT Security Management)
 - Interactions and Collaboration in ITSM
 - Sub-optimal situations in ITSM
 - Diagnostic Work in ITSM
 - Guidelines for ITSM tools

IT security challenges

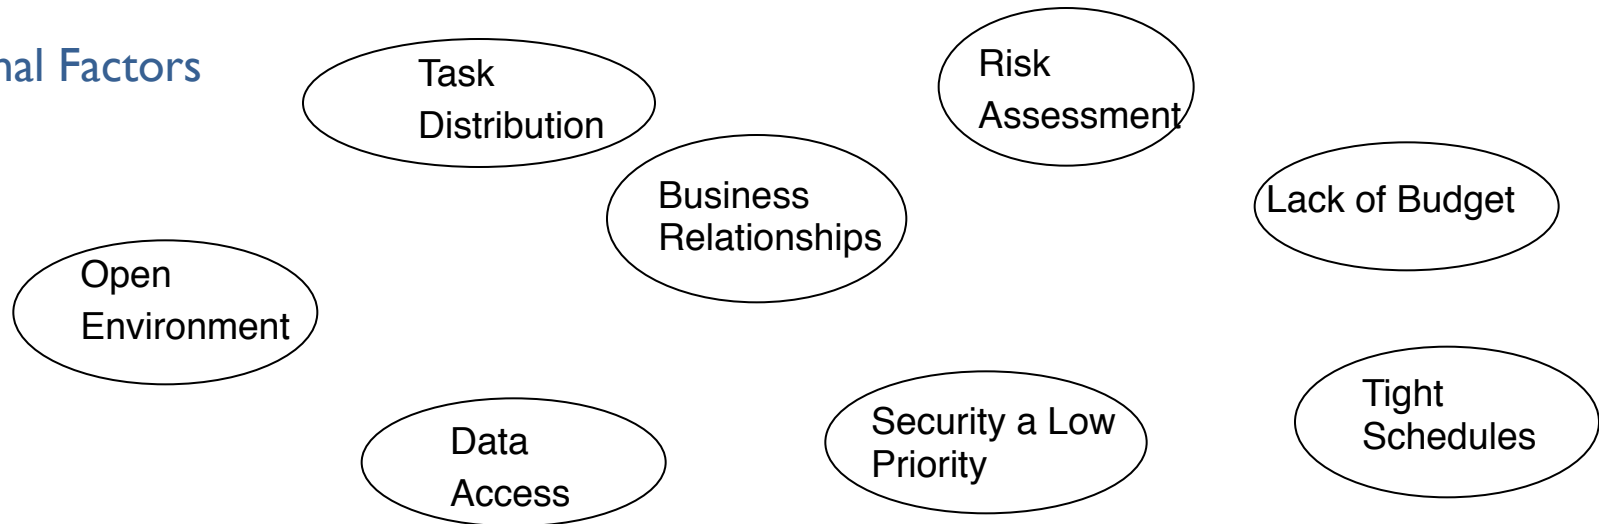

Technological Factors

Human Factors

Organizational Factors

Characteristics of IT security domain

- Technological complexity
- Collaboration
- Stakeholder diversity

Characteristics of IT security domain

- Technological complexity
- Collaboration
- Stakeholder diversity

Usable tools can help security professionals dealing with these three factors

Challenges of studying usability of IT security tools

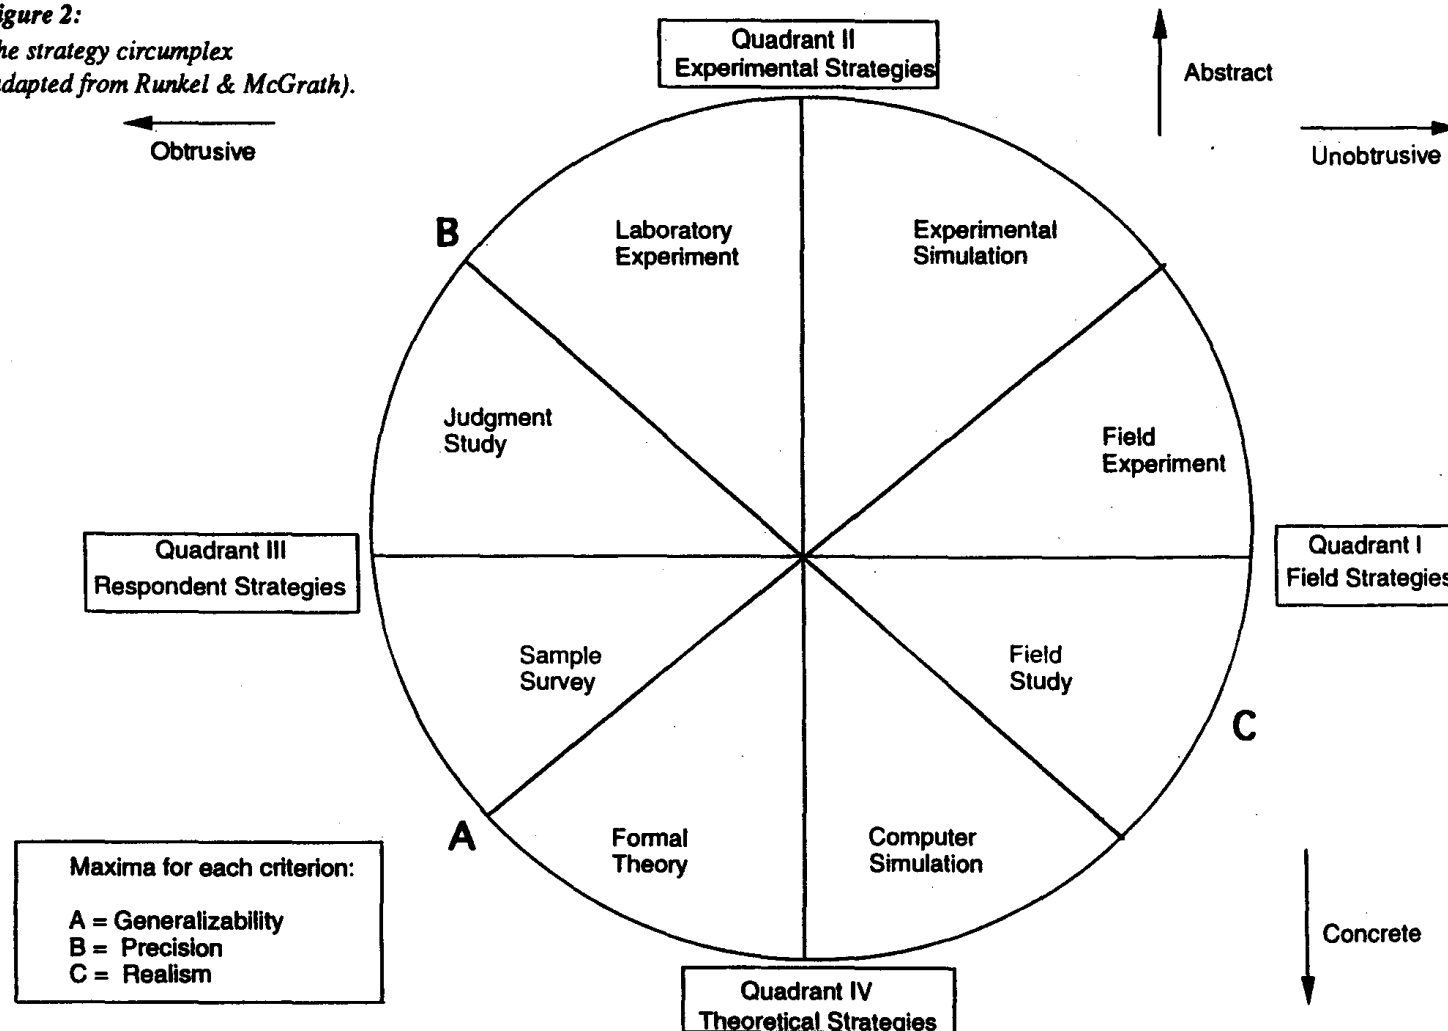

- Recruitment
- Actions are distributed over time and space
- Collaboration
- Technology acquisition

HOT-IdM Project

- Supported by CA and NSERC
- Project Goals:
 - “to further the understanding of the human, organizational, and technological factors influencing the effectiveness of IdM tools and processes within the context of organizations where they are employed”
 - “investigate refinements to the IdM tools in order to better support those organizations that employ them and the IT professionals who operate and manage them”

Background: Guidance for design in HCI

Shneiderman, B. 1997 *Designing the User Interface: Strategies for Effective Human-Computer Interaction*. 3rd. Addison-Wesley Longman Publishing Co., Inc.

Heuristics vs. Guidelines

Nielsen's heuristics

1. Visibility of system status
2. Match between system and the real world
3. User control and freedom
4. Consistency and standards
5. Error prevention
6. Recognition rather than recall
7. Flexibility and efficiency of use
8. Aesthetic and minimalist design
9. Help users recognize, diagnose, and recover from errors
10. Help and documentation

Source: www.useit.com

iOS Location Services and Data Privacy guidelines

1. Make sure users understand why they're being asked to share their personal data
2. Describe why your app needs the information, if it's not obvious
3. Ask permission at app startup only if your app can't perform its primary function without the user's data
4. Avoid making programmatic calls that trigger the alert before the user actually selects the feature that needs the data
5. For location data, check the Location Services preference to avoid triggering the alert unnecessarily

Source: www.apple.com

Heuristics vs. Guidelines

Principles for Secure Systems

1. Path of Least Resistance
2. Active Authorization
3. Revocability
4. Visibility
5. Self-Awareness
6. Trusted Path
7. Expressiveness
8. Relevant Boundaries
9. Identifiability
10. Foresight

(Yee 2002)

iOS Location Services and Data Privacy guidelines

1. Make sure users understand why they're being asked to share their personal data
2. Describe why your app needs the information, if it's not obvious
3. Ask permission at app startup only if your app can't perform its primary function without the user's data
4. Avoid making programmatic calls that trigger the alert before the user actually selects the feature that needs the data
5. For location data, check the Location Services preference to avoid triggering the alert unnecessarily

Source: www.apple.com

Heuristics vs. Guidelines

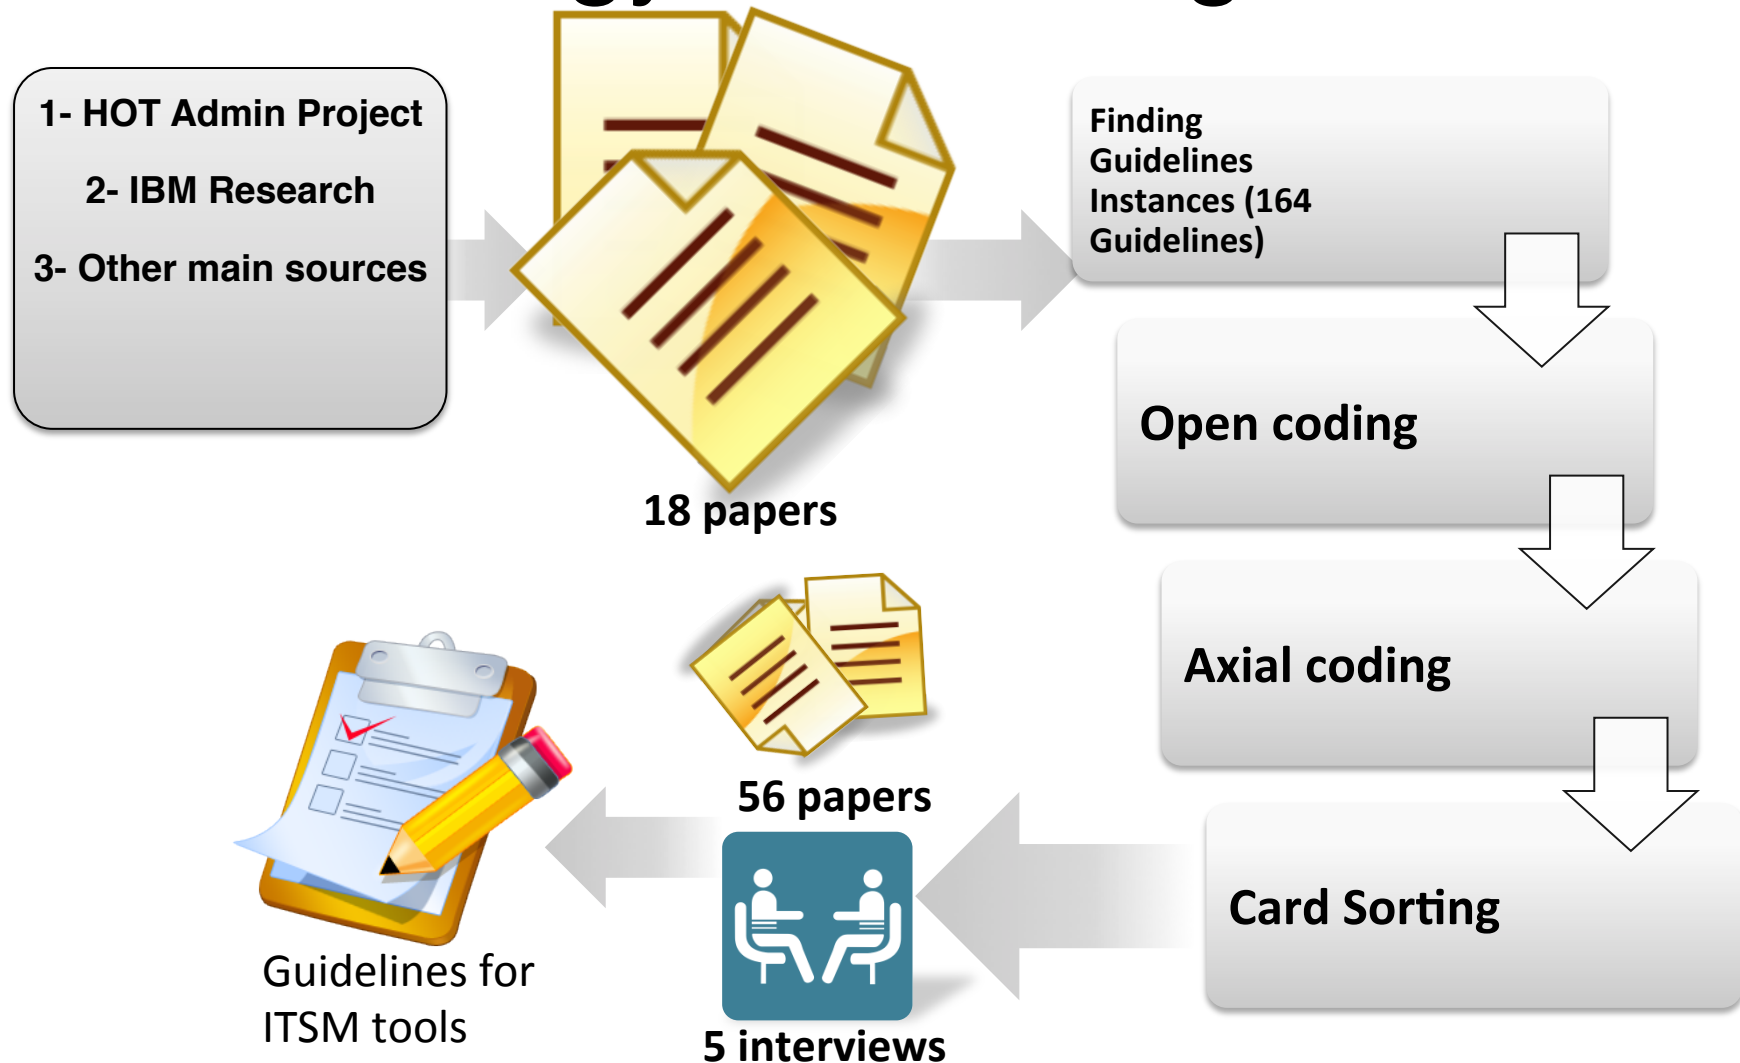

Principles for Secure Systems

1. Path of Least Resistance
2. Active Authorization
3. Revocability
4. Visibility
5. Self-Awareness
6. Trusted Path
7. Expressiveness
8. Relevant Boundaries
9. Identifiability
10. Foresight

iOS Location Services and Data Privacy guidelines

1. Make sure users understand why they're being asked to share their personal data
2. Describe why your app needs the information, if it's not obvious
3. Ask permission at app startup only if your app can't perform its primary function without the user's data
4. Avoid making programmatic calls that trigger the alert before the user actually selects the feature that needs the data
5. For location data, check the Location Services preference to avoid triggering the alert unnecessarily

Methodology for building heuristics

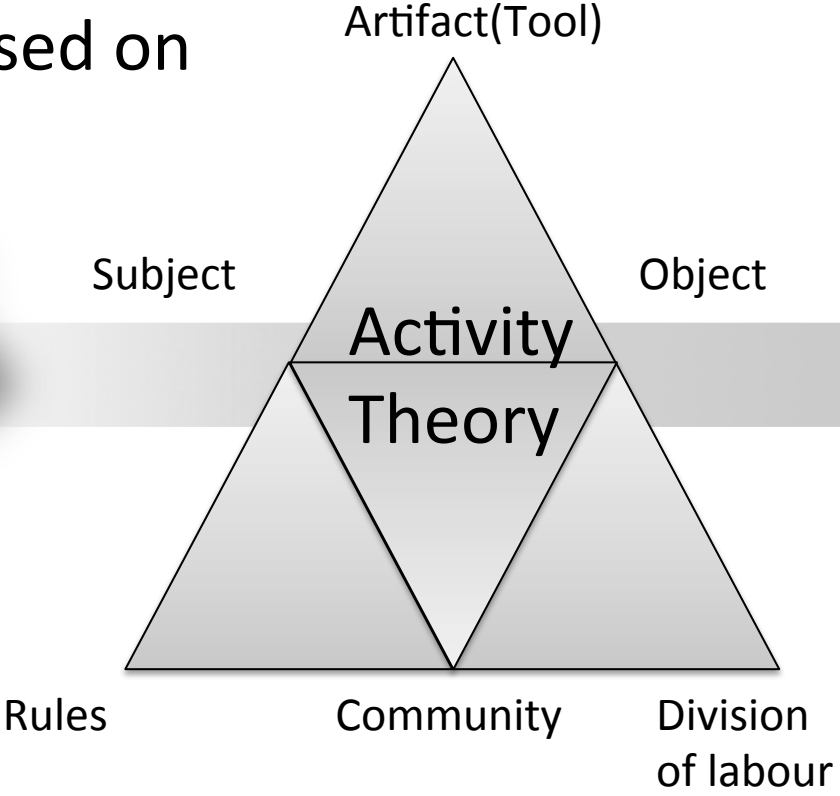

P. Jaferian, D. Botta, F. Raja, K. Hawkey, and K. Beznosov. 2008. Guidelines for designing IT security management tools. In CHI/MIT '08.

Interpretation of Guidelines based on Activity Theory

Interpretation and abstraction based on activity theory

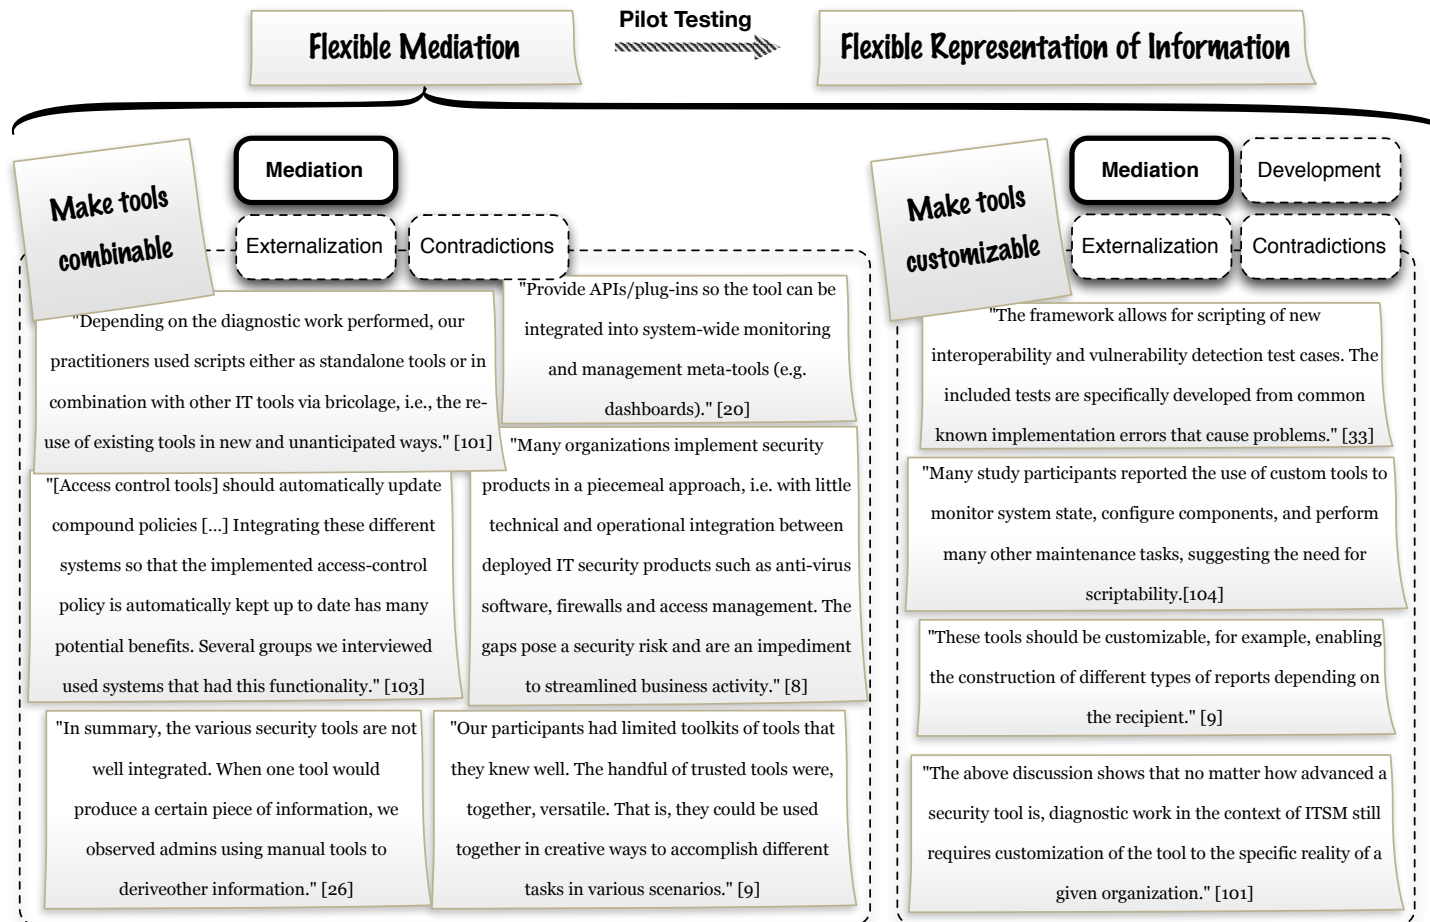

Guidelines for ITSM tools

- 1- ...
- 2- ...
- 3- ...
- 4- ...
- 5- ...
- 6- ...
- 7- ...

Usability Heuristics for ITSM tools

Example of Heuristic Synthesis

ITSM Usability heuristics

- *1- Visibility of activity status*
- *2- History of actions and changes on artefacts*
- *3- Flexible representation of information*
- *4- Rules and constraints*
- *5- Planning and dividing work between users*
- *6- Capturing, sharing, and discovery of knowledge*
- *7- Verification of knowledge*

ITSM Usability heuristics

- *1- Visibility of activity status*
- *2- History of actions and changes on artefacts*

Allow capturing the history of actions and changes on tools or other artefacts such as policies, logs, and communications between users. Provide a means for searching and analyzing historical information.

Evaluation of CA Identity Manager

COMPARING NIELSEN AND ITSM HEURISTICS

Study Goals

- Compare the use of ITSM and Nielsen's heuristics
- Find usability problems in CA identity manager

Study Goals

Independent Variables  Dependent Variables:

What you change in the study

What is expected to change
when you change
independent variable

Study Goals

Independent Variables

- Heuristic Set
- ITSM
- Nielsen

Dependent Variables:

- Number of problems
- Severity of problems

Between vs. Within Subjects

- Each participant is used once
- Each participant is used multiple times

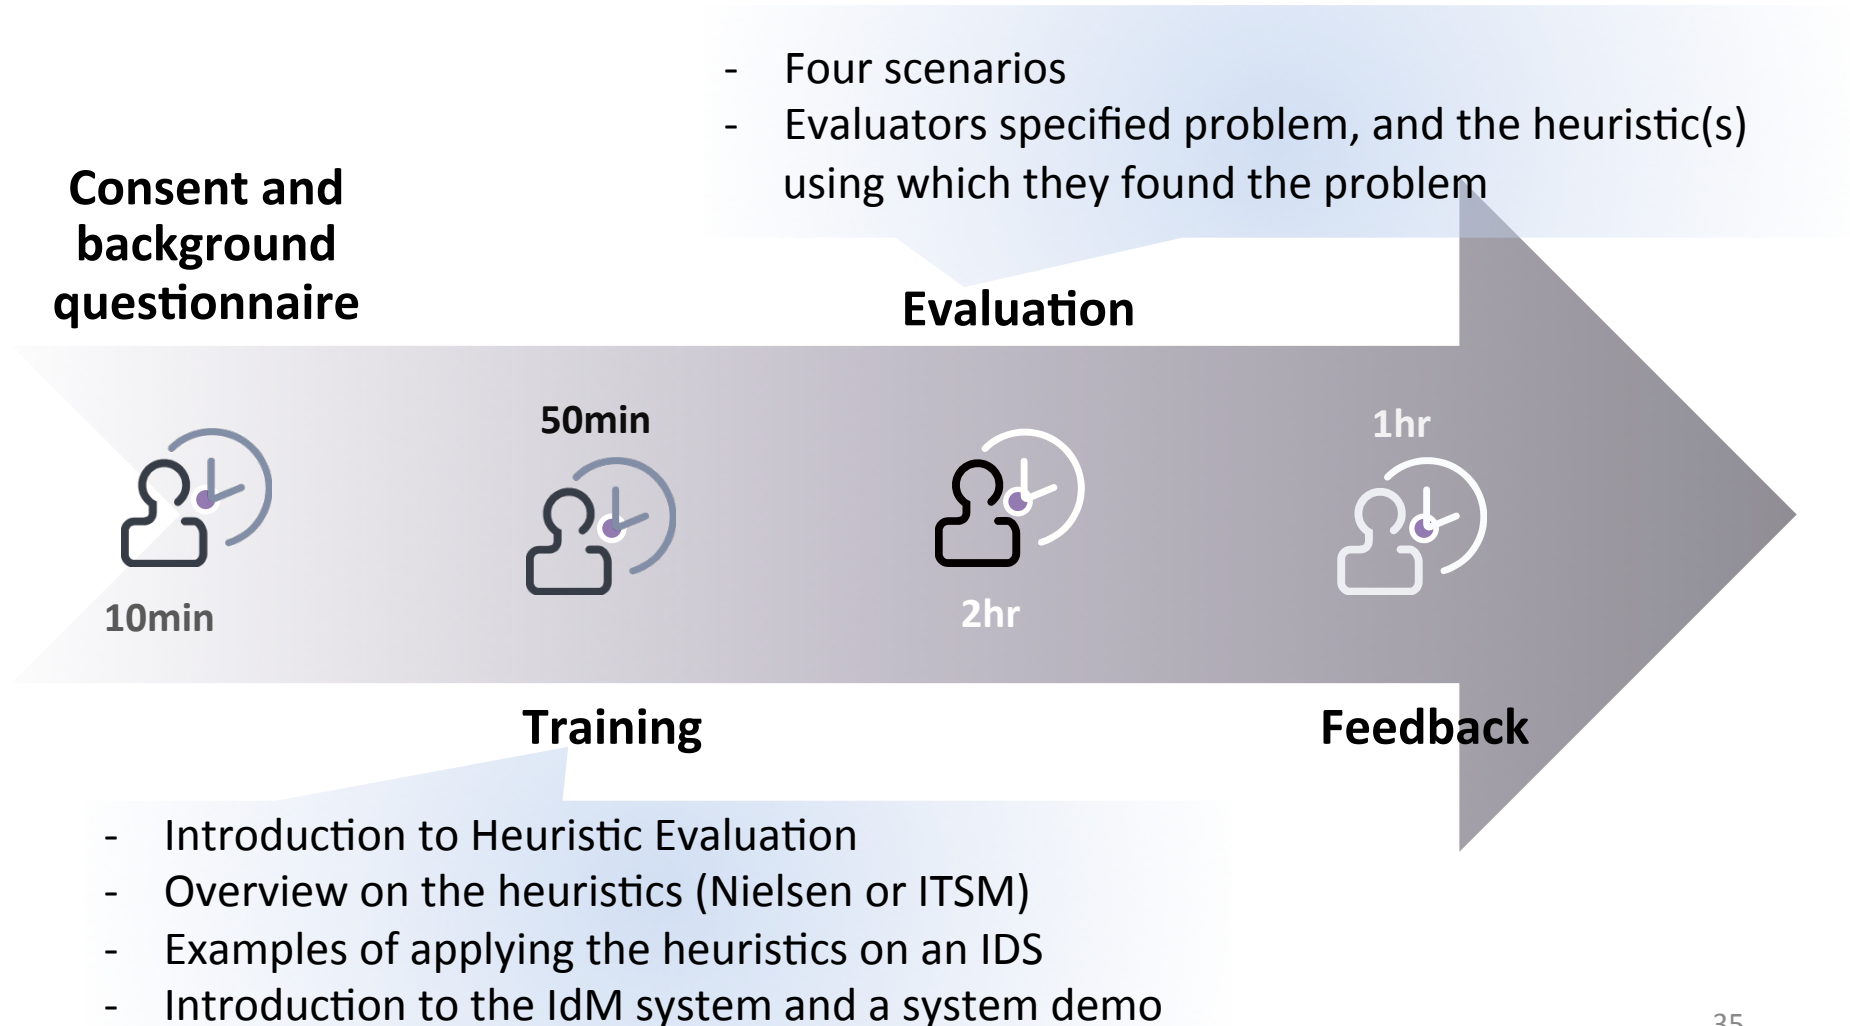

Between vs. Within Subjects

- Each participant is used once
 - Large number of participants
 - Assignment bias
 - High variability
- Each participant is used multiple times
 - Carryover effect
 - Learning
 - Fatigue
 - Long evaluation sessions

Study Design

- A between subjects study with two conditions (ITSM, and Nielsen)
- 14 participants in each condition
- Participants had prior HCI training and heuristic evaluation experience
- CA Identity Manager R12.0 CR3

Comparative Study of ITSM and Nielsen's Heuristics

Data Analysis

Problem Synthesis

- Decompose problems, marking false positives and unknowns

Aggregating problems

- Combining similar problems by different evaluators

Tagging problems

- Mapping problems to heuristics

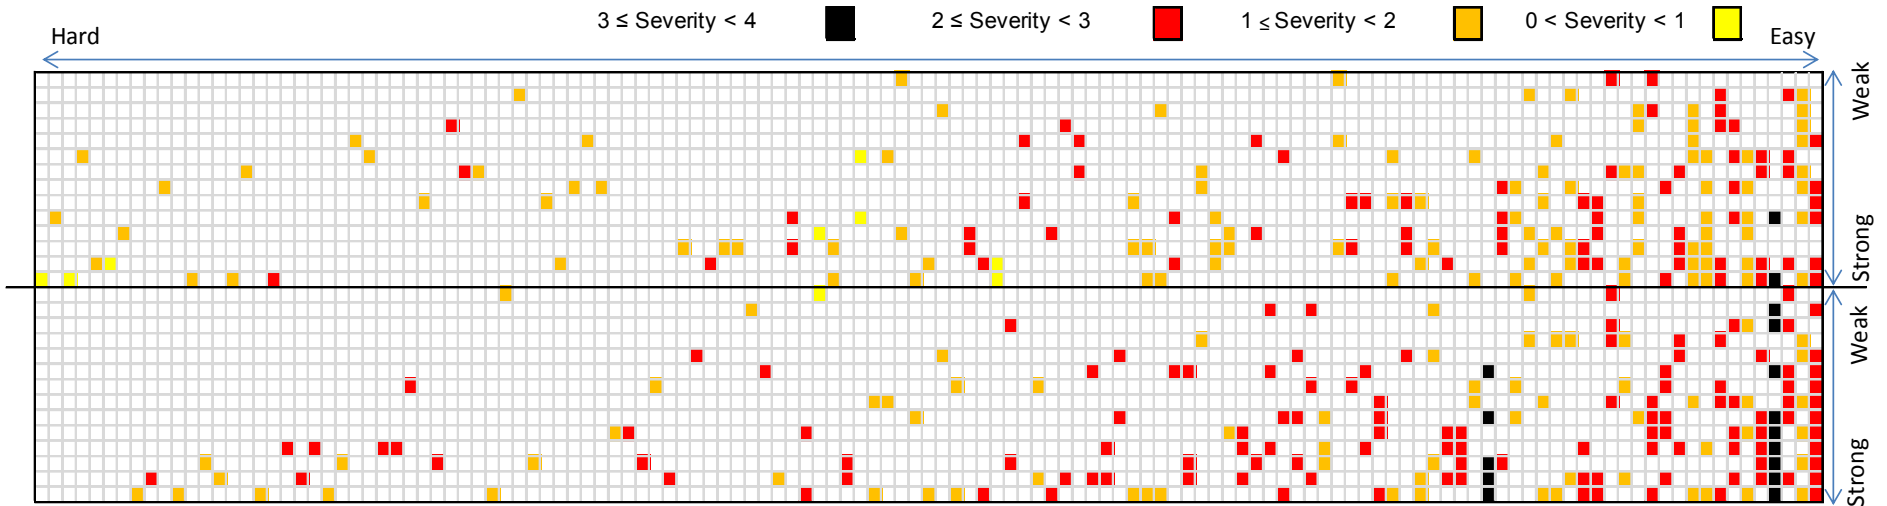

Rating Severity

- Rating severity (1—5)

Overview of Results

Condition	Reports	Tokens	Known	Major	Minor	FP	Unknown
ITSM	239	201	93 77%	38	55	18	16
Nielsen	233	187	86 60%	20	66	45	17
All	472	388	131	37	94	62	33

Comparing individual differences

Summary of findings

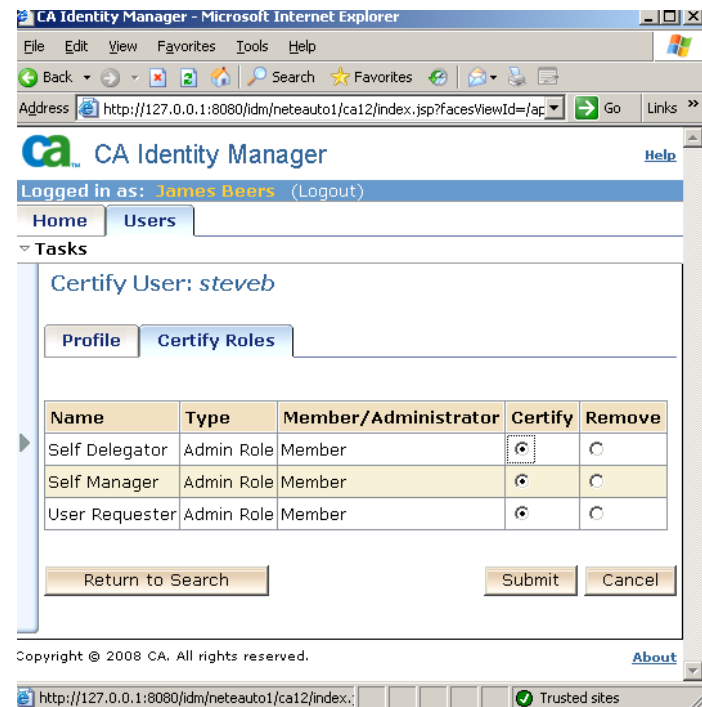

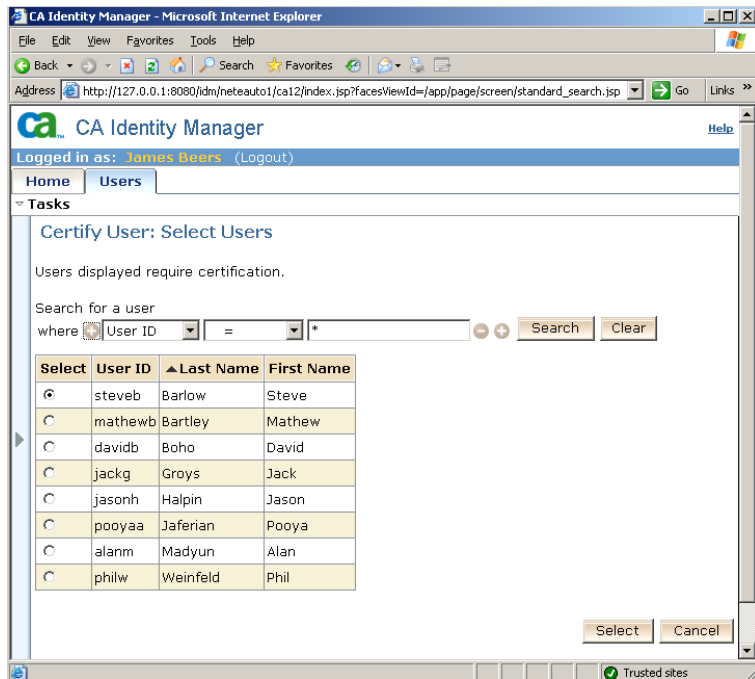

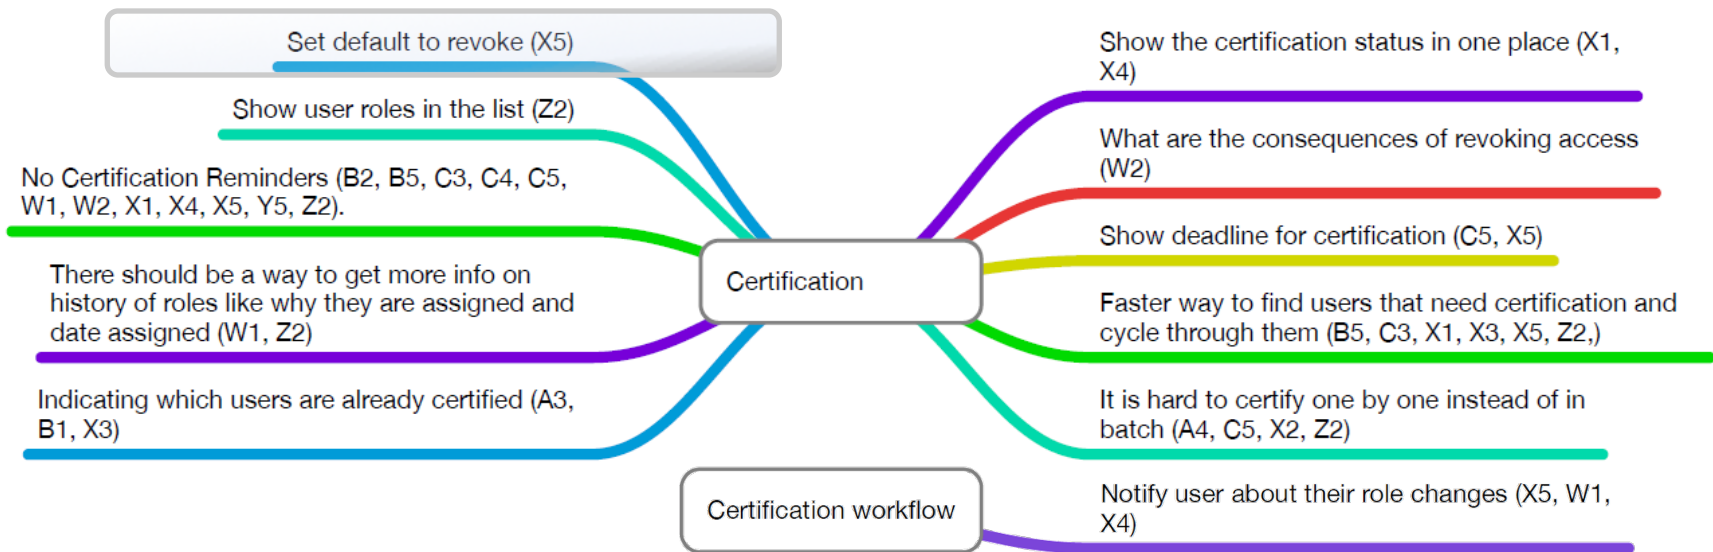

- Severity of the problems found by individual evaluators in ITSM condition is higher than Nielsen condition.
- Participants found the ITSM heuristics to be as relevant, easy to apply, and easy to learn as Nielsen's heuristics.
- Evaluating the IdM system heuristically, required more effort compared to previous evaluations.
- We suggest using both ITSM and Nielsen's heuristics.

Access Certification

PROBLEMS FOUND THROUGH HEURISTIC EVALUATION

Introduction

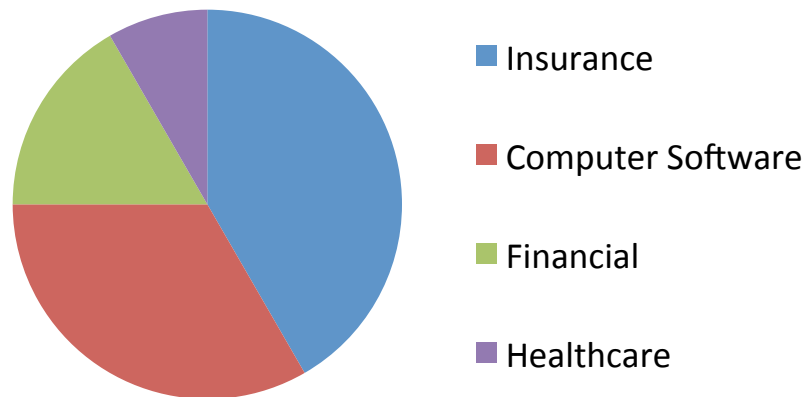

- Heuristic evaluation for 4 scenarios:
 - Self-serve account creation
 - Bulk loader
 - Role request
 - Certification
- Participants codes:
 - A, B, C: Nielsen
 - W, X, Y, Z: ITSM

FIELD STUDY OF IDM

Overview

- 12 Semi-structured interviews

- Between one hour to three hours
- Audio recorded and transcribed
- Analyzed using grounded theory

Qualitative analysis using grounded theory

- simultaneous collection and analysis of data
- creation of analytic codes and categories developed from data
- inductive construction of abstract categories
- theoretical sampling to refine categories
- the integration of categories into a theoretical framework.

Data Analysis

Coding Example

Stories from Interviews

Open Codes

Axial Codes

“...I do my own risk assessment for everything I’m responsible for. Unfortunately in my opinion not enough people understand risk management.”

} Personal assessment of risk
} People do not understand risk management

“in my experience these are some of the things that can happen and these are some of the potential situations you'll have to deal with”

} Explain security risks

“The security coordinators take it to the data guardian and explain the risks.”

} Explain security risks

} Different perceptions of risk

Access Profile

Umhm. Date: 02/09/2012

Nice.

E The compliance manager, the role of compliance manager of product, the compliance mode performs a function like this. So we actually want to get it out of this homegrown stuff, which works, but again highly manual, and get into a system which does this and moves towards continuous compliance as opposed to - you know - quarterly compliance.

R Right

R2 So how do you explain what role mining is to somebody who does not know role mining?

IMPROVING USABILITY OF ACCESS CERTIFICATION INTERFACES

Access Certification

Review of users' access rights

Access Certification

What are the challenges?

1. Lack of understanding of access rights by managers
2. Lack of awareness about users' job function by application owners
3. Frequency (e.g., twice a year or quarterly)
4. Size of user-access rights relationships
5. Exceptional cases
6. Involves negotiation and communication

Design Goals

- Support certification tasks
- Visibility of history
- Visibility of activity status
- Provide multiple, hierarchical views
- Provide communication and negotiation channels
- Provide risk indicators
- Highlight policy violations

High-Fidelity Prototypes

Determine the state of each user-access right assignment as one of the following:

- Undetermined** (the assignment of the user to the access right will not be marked as certified and automatically be revoked after certification deadline)
- Revoke** (the access right will be revoked from the user after submission of this form)
- Certify** (the user will retain the access right)

Users with more access rights are shown higher than the users with fewer access rights. Access rights that are assigned to more users are shown on the left hand side of the access rights that are assigned to fewer users.

Users displayed require certification:

Tools for prototyping

Omnigraffle

Balsamiq mockups

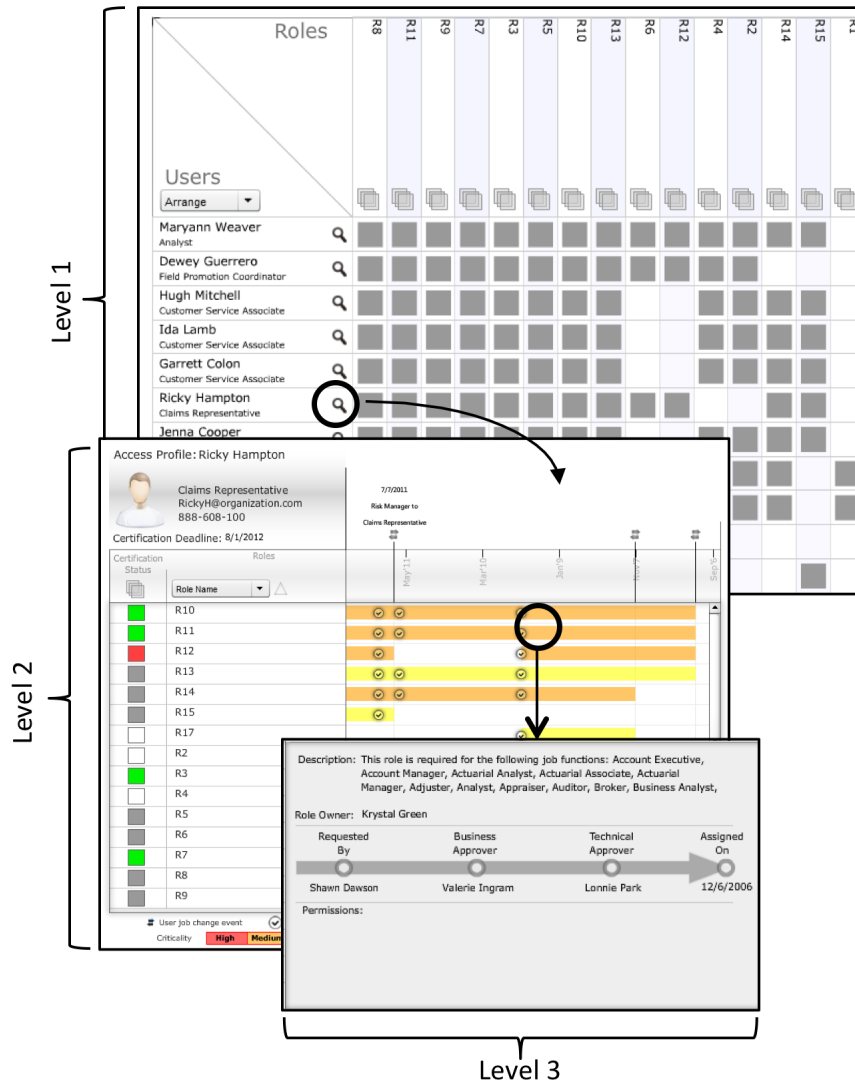

MS Visio

Adobe Flash

Final Prototype

Interface Demo

- <http://goo.gl/qZTPF>

Future Plan: Lab study

- Lab study with three conditions: Proposed, CA Identity Manager, Aveksa
- Four tasks
 - Basic certification of known access-rights
 - Recurrent certification of known access-rights
 - Certification of unknown access-rights
 - Risk assessment
- Compare interfaces in terms of:
 - Accuracy
 - Efficiency
 - Awareness

Summary

- IT security management is challenging
- Conducting usability studies of ITSM tools is hard
- We presented different methods of addressing usability of ITSM tools:
 - Heuristic evaluation
 - Field study
 - Lab studies
